ENGINEERING

Mechanical engineering technologists implement and extend existing technology; they are able to pursue careers in industries that deal with several aspects of mechanical systems such as:

- **Installation**
- **Manufacturing**
- **Testing**
- **Technical sales**
- **Maintenance**

The Mechanical Engineering Technology curriculum prepares students with knowledge, problem solving ability, and hands-on skills for practice in product improvement, manufacturing, and engineering operational functions.

Our engineering technology curriculum offers students options to become “engineering technologists and more” in career development, such as:

- A five-year MBA and engineering degree
- An unmanned aircraft systems applications certificate upon completion of additional coursework
- Concentrations in particular areas of engineering technology practice through the choice of technical electives

Our Mechanical Engineering Technology program is accredited by the Engineering Technology Accreditation Commission of ABET, www.abet.org.

Financial Assistance

Numerous scholarships and financial aid programs are available for eligible students, please visit:
