

**Thursday, 11/11 12-1PM Central**  
**[Join via Zoom](#)**

Hanover Research is a global research and grant development firm that works with higher education institutions to pursue external funding for research and scholarship. On **November 11th**, at **12PM CST**, the Division of Research and Innovation will sponsor a Hanover-led virtual training session targeted to faculty considering submitting a CAREER proposal. Please contact Dr. Larisa Ford ([Larisa.ford@tamucc.edu](mailto:Larisa.ford@tamucc.edu)) for more information.

## Designing Competitive Projects

After debunking popular myths associated with the NSF CAREER program, we will explore how to determine if a submission is appropriate, soliciting feedback, key components of the CAREER proposal, and integrating research with education and outreach plans. We will also outline a suggested proposal development timeline, breaking down the process into clear and discrete milestones. Attendees will gain an understanding of the keys to CAREER success and leave with a clear path to begin developing a competitive submission.

### Presenter: Dr. Bryan DeBusk, Sr. Grants Consultant

Bryan specializes in program design, research design, and proposal development to support the grant writing efforts of basic and clinical researchers, higher education faculty, and other college and university staff. Since transitioning from a university faculty appointment to full-time grant writing in 2008, Bryan has helped clients obtain more than \$310 million in funding from NIH, NSF, HRSA, DOL, ED, other federal & state agencies, and private foundations.
