Ideal-Logic Overview

The platform for both Compliance and Registration is Ideal-Logic. The two platforms operate independently. This is an overview of each.

Compliance

(https://apps.ideal-logic.com/tamusyouthsafety) This side of Ideal-Logic has many of the components used to assure compliance with state laws as well as System and University Rules. The components include:

- Compliance Application and Dashboard-The application is generally the first step in requesting a Session (camp) for the program. Along with dates, times and estimated number of youth, this requires the director to think through and answer procedural and safety questions. Some other features of the Compliance Application and resulting Dashboard:
    - Record of camp insurance application number is added to the compliance application.
    - Estimated number of youth per age group is entered into a ratio matrix showing how many staff would be required per youth per age group.
    - Program Staff (staff roster) will be filled into the session. It is not required to entire complete roster to submit the application. The director can log back in to complete.
        - This is the platform that will process all the staff compliance requirements (Background Check, Child Protection Training, Clery Training, and volunteer waivers if needed).

Registration

(https://apps.ideal-logic.com/tamuccreg) This contains all the specifics for participants to register for a particular camp session of interest. Some of the features include:

- The age or grade filter will only allow appropriate registrations.
- Participant information, required demographics, guardian information, waivers and medical information and guardian signatures.
- Camp specific questions can be tailored (such as position or instrument).
- Reporting for registration numbers and financial.
